

10th International Conference on Genomics and Molecular Biology. Barcelona, Spain. May 21-23, 2018

Conference Name: 10th International Conference on Genomics and Molecular Biology

Conference Short Name: Genomics 2018

Venue: Barcelona, Spain & Dates: May 21 - 23, 2018

Genomics 2018 will provide a perfect platform to all the Scientists, Researchers, Students and Business Delegates to approach and deliver all the attendees about the latest scientific advancements on the respective sphere.

Genomics-2018 Genomics is an area within genetics that concerns the sequencing and analysis of an organism's genome. Genomics also involves the study of Molecular Biology, intragenomic processes such as epistasis, heterosis and pleiotropy as well as the interactions between loci and alleles within the genome. The fields of molecular biology and genetics are mainly concerned with the study of the role and function of single genes, a major topic in today's biomedical research. By contrast, genomics does not involve single gene research unless the purpose is to understand a single gene's effects in context of the entire genome

Conference Highlights: Cancer genomics, Molecular Biology, Plant Genomics, Structural Biology, Stem Cell Biology, Human Genomics, Bioinformatics in Genomics, Cell Biology, Next Generation Sequencing, Comparative Genomics, Functional Genomics, Pharmacogenomics and Clinical Genomics, Gene Editing and CRISPR Based Technologies, Genome Medicine, Biomarkers, Microbial Genomics, Proteomics, Genome Engineering, Future Trends in Genomics and Genomics Market.
