

Novel Cancer Therapeutics Summit 2016

Organizer: GTCbio

Start date: November 7th, 2016 **End date:** November 9th, 2016

We invite you to attend the **2016 Novel Cancer Therapeutics Summit**, to be held on **November 7-9, 2016** in **San Francisco, CA**. This summit includes four parallel conferences focused on both the research, and business perspectives in oncology.

This summit will continue to be a premier event for translational researchers, preclinical scientists and managers, and those carrying out early phase clinical trials working to identify and exploit advances in the field of oncology in order to deliver products with a meaningful clinical impact. In addition, industry leaders from big pharma and various biotech/pharmaceutical companies, including business/corporate development executives, licensing executives, global alliance, and venture capitalists, will all be present to explore potential collaborations and learn about relevant issues in oncology.

Focus areas include cancer diagnostics, cancer immunotherapy, cancer epigenetics, as well as partnering and deal-making in oncology. Discussion topics include emerging targets, therapeutic strategies, epigenetic targets and tools/technologies, next generation sequencing in cancer diagnosis, progress in cancer immunotherapy, combination strategies in immuno-oncology, advancements in technology, as well as business development trends, markets, partnership opportunities, and access to capital market.

Both cutting-edge researchers and those who guide its commercial development will be on-hand to share their knowledge and insights as to how therapeutic cancer targets are identified, and how this research translates into meaningful therapeutics that benefit patients living with cancer!

Sign up for the [Summit Pass](#) to have access to all five conferences of the summit!
